

Muhammad Irfan

Backend Developer

location: Pakistan email: iamirfan200@gmail.com github: github.com/laradev220

const summary = new Summary();

Backend Developer with 2 years of hands-on experience designing and developing server-side applications. Proficient in building RESTful APIs using Laravel 12 and Node.js/Express with TypeScript, implementing JWT authentication and role-based access control systems. Experienced with PostgreSQL (Prisma ORM), MySQL/MariaDB, and Redis for data persistence and caching. Strong background in multi-tenant architecture with complex permission hierarchies and background job processing.

const skills = { ... };

Languages & Frameworks:	PHP (Laravel 12, CI 3/4), Node.js, TypeScript
Databases:	PostgreSQL (Prisma), MySQL/MariaDB, Redis
API & Architecture:	RESTful API, OpenAPI/Swagger, JWT, WebSocket
DevOps & Tools:	Docker, Kubernetes, Git

```
const projects = [ ... ];
```

Group Ticketing Module // Node.js | Express | TypeScript | MySQL | Sequelize

Multi-tenant flight group booking system

- Built multi-tenant system with 11 database models (agencies, users, flight groups, bookings, passengers)
- Implemented role-based access control (Admin, Manager, Sub-Agent) with agency scoping
- Developed booking workflow with seat allocation, hold expiry, payment proof upload, PNR/ticket management
- Implemented background job for hold expiry with cron-based seat release

Bitcoder E-Learning API // Laravel 12 | PHP 8.2 | MySQL | Redis

Full-featured e-learning backend

- Developed RESTful API with endpoints for courses, lessons, enrollments, and user management
- Implemented token-based authentication using Laravel Sanctum with role-based access
- Configured async task queues with Redis for background processing
- Generated OpenAPI documentation using Scramble

Franchise Manager // CodeIgniter 4 | PHP 8.1 | MySQL

Comprehensive franchise accounting system

- Built complete accounting module: invoices, receipts, general ledger, day book transactions
- Developed employee management with salary batch processing, allowances, and deductions
- Implemented cheque tracking system with status management (pending/cleared/bounced)
- Created financial reports and recovery management for unpaid invoices

Research Survey Application // Pure PHP | MySQL

Multi-tenant research survey platform

- Developed zero-dependency PHP application optimized for cPanel/shared hosting deployment
- Built multi-tenant survey system with role-based access (Researcher, Admin, Super Admin)
- Implemented advanced analytics with filtering, charts (Chart.js), and data export
- Ensured security with prepared statements, CSRF protection, and audit logging

Brand API // CodeIgniter 3 | MySQL

Brand submission and management API

- Built REST API for brand form submissions and management
- Implemented admin dashboard for form and submission handling

`const experience = [ ... ];`

Apprenticeship

Backend Developer Trainee – 6 months

`const education = [ ... ];`

BS Computer Science

Abasyn University Peshawar
